

Print systems are provided. A representative print system includes a printing device and a print authorization system. Preferably, the printing device includes a first print cartridge containing a print substance as well as a readable identification tag for providing first information. The printing device also includes an identification reader for receiving the first information. The identification reader enables the printing device to print if the first information corresponds to the printing device. The print authorization system is configured to receive, via a network, information to be printed and second information corresponding to a user. Third information can be received and, if the third information corresponds to the second information, the print authorization system enables the printing device to print the information to be printed. Methods, computer readable media and other systems also are provided.
